CO₂ data and information

CO₂ emission based Vehicle Excise Duty.

Vehicle Excise Duty (Road Fund Licence) is based upon the type of fuel the vehicle uses and its carbon dioxide (CO₂) emissions level, measured in grams per kilometre (g/km). The DVLA has created five categories for petrol engines and five categories for diesel engines including a new category for low CO₂ emitting vehicles.

	Petrol engines	Diesel engines
AA – upto 121g/km	£ 75.00	£ 85.00
A – 121 to 150g/km	£105.00	£115.00
B – 151 to 165g/km	£125.00	£135.00
C – 166 to 185g/km	£145.00	£155.00
D – over 185g/km	£160.00	£165.00

CO₂ emission based Company Car Tax.

The weight of a vehicle will influence the level of CO₂ emission it produces, as a result vehicles with higher specification and factory fitted options may emit higher levels of CO₂. To assist you in calculating the CO₂ emissions for your personal choice of Audi model and additional optional equipment, we have published the incremental weight in kgs for each model and its available additional optional equipment in the pages of this price list.

To calculate the CO₂ emissions add the incremental weights for any additional optional equipment to the basic vehicle weight (this weight is for calculation purposes only and does not refer to any other vehicle weight). Look up this total weight in the appropriate band, in the CO₂ tables opposite, next to your engine and transmission combination. The figure quoted is then the guide CO₂ emission for your personally configured Audi.

		Total vehicle weight bands including your selected optional equipment (kg)		
		941 to 1055	1056 to 1165	1166 to 1280

Due to Audi's continuing process of improvement, changes may be made to specifications and/or their respective weights at any time, therefore the weights quoted in this price list should be treated as a guide only.
